

# 100GE

- Who sees there is a need for 100GE in the infrastructure in the near future.
- Who sees value in a 40GE solution when it comes available in the same timeframe as 100GE
- There might be a possibility to have a 40GE semi standard developed as an MSA
- Who sees any value in a 40GE solution when it becomes available late 2008
  - This would be an optical solution using LAG and DWDM integrated on the line card
